Naveen Kumar N

FULL STACK DEVELOPER

+91 8610238817 | itisnaveen.nv@gmail.com | LinkedIn

Summary about me

Motivated stack developer with 4 years of experience developed responsive webpages. Committed to delivering customer's requirement with positivity and professionalism. Under my leadership trained a crew and completed a complex project.

Work Experience

HandBuilt Apps   **MAR 2022 - PRESENT**
- Increased customer retention by 20%
- Reduced fraudulent charges by 50%
- Improved product recommendations and increased sales

Triple D Technology   **Nov 2020 – Feb 2022**
- Cleaned and preprocessed data
- Conducted statistical tests for decision support

Animotronex Technologies Private Limited   **Jul 2019 – Aug 2020**
- Cleaned and preprocessed data
- Conducted statistical tests for decision support

Education

Ayya Nadar Janaki Ammal College   **Jun 2016 - Jun 2019**
Bachelor of Computer Application
CGPA 69%

Sundaravel Higher Secondary Matriculation School   **Jun 2014 - Apr 2016**
Higher Studies
Percentage 78.3%

Good Shepherd Matriculation School, Sivakasi   **Jun 2013 - Apr 2014**
Secondary Schooling
Percentage 96.4%

Skills and Abilities

Programming Technologies	HTML, CSS, JavaScript, jQuery, ajax
Frontend Frameworks	React JS, Next JS, Angular JS
Backends	PHP, Django Rest framework
Databases	MySQL
Web Service	REST API (Django), PHP simple API
Version Controls	Git, GitHub, Gitlab, Bitbucket, Azure
Project Management Tools	Jira, Trello
Other Technologies	Redux, GraphQL, Greensock Animation Plugin
Bug Tracking Tools	Trello, Jira, Bugherd
Corporate Skills	Leadership quality and capability to handle client independently Interact with client and Presentation, Design and Architecture

Professional Experiences

#Project 1

Konekt Consultancy (Under Development)   **Present**

Technologies: Next JS, GSAP, Yii2 Rest API

Database: MongoDB

Team Size: 2

Role: Lead Developer

Responsibilities:

- Designed attractive UI design and developing a web application using Next JS.
- Animated pages using GSAP library.
- Integrated Web API calls and JSON for generating dynamic pages.
- Developed Content Management System for creating dynamic pages.

Description:

- This website not only embodies Konekt Consultancy's professionalism but serves as a user-centric portal, providing clients with an immersive platform to explore the agency's diverse consulting services.
- The synergy of advanced technology and thoughtful design sets a new standard for Konekt's online presence, offering a visually engaging and informative digital experience.

#Project 2

Prince's Trust   **4 Months**

Technologies: React JS, Next JS, GraphQL, Redux

Backend: Contentful CMS

Team Size: 2

Role: Lead Developer

Responsibilities:

- Designed attractive UI design and developing a web application using React JS wrap up by Next JS
- Integrated Contentful GraphQL API call using axios and redux for state management.

Description:

- Notably, the project integrates a seamless Stripe payment system, enabling card and wallet transactions for effortless and secure donations. Furthermore, a sophisticated course finder chat bot, backed by static logic, engages users dynamically.
- This endeavour at the intersection of technology and philanthropy fosters an innovative platform, empowering users to contribute seamlessly and explore relevant courses with ease.

#Project 3

<u>**Podium – Sportsmart Hub**</u>   **5 Months**

Technologies: React JS, Redux, Django Rest API Framework

Database: MongoDB

Team Size: 2

Role: Lead Developer

Responsibilities:

- Worked as a Full stack developer / Technical lead and involved in Analysis, Design, Development, Testing the workflow and web service using Django Rest APIs.
- Designed and developed an online media and document streaming web application.
- Written reusable, testable, and efficient code.
- Developed the micro service and rest API.
- Integrated web API calls using axios and redux.

Description:

- Podium transcends typical platforms; it emerges as a dynamic sports education hub, delivering curated insights, educational content, and features centred on critical topics in youth sport health.
- This pioneering initiative seamlessly blends technological innovation with sports expertise, serving as an invaluable resource for athletes, coaches, and enthusiasts.

#Project 4

<u>**Ricoh**</u>   **2 Months**

Technologies: Angular JS

Team Size: 1

Role: Frontend Developer

Responsibilities:

- Designed a sleek UI design using Angular JS
- Written reusable, testable, and efficient code.

Description:

- RICOH Spaces stands as a dynamic and intelligent platform, revolutionizing collaboration, optimizing operations, and seamlessly adapting to the ever-evolving landscape of modern work trends. It not only promises superior employee experiences but also serves as a visionary glimpse into the future of workspace management.
- With a commitment to adaptability and collaboration, RICOH Spaces redefines the workplace, presenting a smart and intuitive solution for the modern workforce.

#Project 5

Scarlet Event Management   **6 Months**

Technologies: React JS, Redux, Yii2 Rest API

Database: MongoDB

Team Size: 2

Responsibilities:

- Designed and developed a web application using React JS.
- Integrated Web API calls and JSON via axios.
- Written reusable, testable, and efficient code.

Description:

- The main scope of the app is to empowers users intricately configure event specifics, encompassing date, guest count, budget, and personalized transportation preferences.
- From orchestrating hotel bookings to facilitating airport pickups, Scarlet Events promises a holistic event planning journey. This all-encompassing solution not only harmonizes but also sets a new standard for crafting memorable, meticulously executed occasions.

#Project 6

eDofE   **Present**

Technologies: React JS, Redux, C#.Net Web API

Database: SQL Server

Team Size: 5+

Role: Frontend Developer

Responsibilities:

- I assumed comprehensive responsibilities, spanning better performing frontend UI design, CMS management, Monitoring, Postproduction Management, and meticulous end-to-end testing.
- Integrated C#.Net web APIs via axios
- Written reusable, testable, and efficient code.

Description:

- eDofE is a digital system where participants seamlessly record and manage their DofE program and activities online. Facilitating collaboration with DofE Leaders, the platform ensures the approval of each section. Upon enrolment, participants receive login details, activating their account to choose activities and set objectives.
- eDofE stands as a transformative digital companion, simplifying and enhancing the DofE experience for aspiring participants.

#Project 7

<u>**Asurafin**</u>   **5 Months**

Technologies: React JS, Redux, Yii2 Web API

Database: MongoDB

Team Size: 4+

Role: Frontend Developer

Responsibilities:

- I assumed comprehensive responsibilities, spanning better performing frontend UI design, CMS management, Monitoring, Postproduction Management, and meticulous end-to-end testing.
- Integrated Web API calls and JSON via axios.

Description:

This application enable user to request insurance proposal for any items.

#Project 8

<u>**Accomodation4U**</u>   **6 Months**

Technologies: Angular JS, PHP simple API, AJAX, jQuery

Database: MySQL

Team Size: 1

Responsibilities:

- I spearheaded responsibilities ranging from crafting an intuitive management dashboard frontend UI to engineering a responsive backend, with meticulous end-to-end testing ensuring a flawless user experience.

Description:

- This innovative system presents a fully digitalized room booking platform for both client staff and users. Notably, it introduces an automated agreement generation system with predefined terms and conditions, streamlining processes. The system's ingenuity extends to an automation feature for room renewals, seamlessly triggered seven days before expiration.
- With a sleek design prioritizing optimal UI performance, Accommodation4U emerges as the epitome of modern accommodation solutions, revolutionizing the booking experience.

#Project 9

<u>**Sri Annai Vidyalaya Matriculation School Mobile Application**</u>   **3 Months**

Technologies: JAVA with xml code design, PHP simple API

Environment: Android Studio

Database: MySQL

Team Size: 1

Responsibilities:

      As the sole contributor to this project, I meticulously engineered a dynamic web experience using PHP, HTML5, CSS, and JavaScript.

Description:

- The website serves as a captivating narrative for an esteemed educational program, seamlessly weaving together intriguing content and a visually arresting gallery of images that showcase the institute's distinct identity.
- The crowning feature, the "Online Class" section, revolutionizes learning by providing students with direct access to enriching lecture videos from their cherished educators.

#Project 10

<u>**Sri Annai Vidyalaya Matriculation School**</u>   **2 Months**

Technologies: PHP, HTML5, CSS, jQuery, Ajax

Database: MySQL

Team Size: 1

Responsibilities:

      As the sole contributor to this project, I meticulously engineered a dynamic web experience using PHP, HTML5, CSS, and JavaScript.

Description:

- The website serves as a captivating narrative for an esteemed educational program, seamlessly weaving together intriguing content and a visually arresting gallery of images that showcase the institute's distinct identity.
- The crowning feature, the "Online Class" section, revolutionizes learning by providing students with direct access to enriching lecture videos from their cherished educators.
- Through a harmonious fusion of technology and design, this meticulously crafted platform not only informs but immerses visitors in the institution's ethos, fostering an online space that mirrors the excellence and dedication of the educational program.

#Project 11

<u>iBank banking software</u>

Technologies: HTML5, CSS, JavaScript, PHP

Environment: Electron

Database: MySQL

Team Size: 1

Role: Lead Developer

Responsibilities:

- As the sole team member, my responsibilities encompassed both frontend design and backend development, with meticulous end-to-end testing ensuring a flawless user experience.
- Managed multiple accounts detail and split up to modules for reusing in various banking section.

Description:

- iBank aims to streamline and digitize client banking accounts, providing a secure and user-friendly platform for managing financial information for bank internal purpose.
- With an emphasis on intuitive design and data integrity, the application ensures a seamless and efficient experience for users to access and monitor their account details. iBank represents a comprehensive solution, harmonizing technology to enhance and simplify the intricacies of personal banking.

#Project 12

<u>Inventory Management</u>

Technologies: PHP, HTML5, CSS, jQuery, Ajax

Database: MySQL

Team Size: 3

Role: Lead Developer

Responsibilities:

- I orchestrated a comprehensive solution using HTML5, CSS, PHP, and the WooCommerce API, encapsulated by MySQL database. As the sole contributor, my responsibilities spanned frontend UI design, backend development, CMS management, and end-to-end testing.

Description:

- This system seamlessly monitors and updates product stock quantities through a daily cron job. Notably, the application boasts a robust feature set, including the creation and management of proforma and GST invoices.
- With a focus on user-friendly design and automation, this inventory management system ensures efficient and accurate stock control while facilitating seamless invoicing processes for enhanced business operations.
